BLOCKCHAIN

FORTUNE SCAN BLOCKCHAIN

LAYER 1 BLOCKCHAIN

Blockchain is the backbone of cryptocurrency. It is a decentralized ledger of all transactions across a network. This technology ensures that data is secure, transparent, and immutable, making it almost impossible to alter transaction history.

This EVM based Layer 1 Blockchain network operates as the base protocol, directly managing consensus, transaction validation, and data storage without relying on other layers. This provides a secure, decentralized foundation for building applications, tokens, and decentralized finance protocols.
